ICONSPCTS

Quicklink: Q1734

General
Colour	White

Electrical
Voltage	12V

The **12V Adjustable Timer Module** allows you to turn your extractor fan on or off using the built in timer between 1 to 45 minutes after activation by remote, light or door switch operation. Just tug on the pull cord to start or stop the timer. Please note that this should only be used with the **Icon Isolator Fan 12V** as it is specifically designed to work in more extreme wet areas.

All modules are easily fitted. Simply remove the cover and snap in the module. The module is sculpted so that it fits into the current extraction fan housing, therefore giving you extra functionality without any ugly or bulky add on. It also allows you to add functionality to your Icon fan at a later date to any installation where it is currently installed.
