

The **Inductive Load 2 Way Dimmer Module** allows you to custom make your own switches as they easily attach to standard manufactured wall plates. They are also used to replace faulty or broken modules in existing switches. If purchased for this purpose, please ensure that you select the correct wattage and check whether it is a an inductive or resistive load.

This particular module is only suitable for inductive loads (for use with coil transformers), not resistive loads where electronic transformers are used. If used for mains voltage lamps, please follow the minimum and maximum loads given on this products specification. For GU10 mains voltage halogen lamps, the load must not exceed 250W.

General

Colour	Black
Construction	Plastic
IP Rating	IP00

Load Type	Inductive
-----------	-----------

Dimensions

Depth	26mm
Length	50mm
Width	42mm

Electrical

Maximum Wattage	400W
Minimum Wattage	40W
Voltage	240V
