

IDIMP1000

Black 1000W

Quicklink: Q1716

General

Colour	Black
Construction	Plastic
IP Rating	IP00

Load Type	Resistive
Spindle Length	12mm

Dimensions

Depth	26mm
Length	50mm
Width	42mm

Electrical

Maximum Wattage	1000W
Minimum Wattage	60W
Voltage	240V

The **Resistive Load 2 Way Dimmer Module** allows you to custom make your own switches as they easily attach to standard manufactured wall plates. They are also used to replace faulty or broken modules in existing switches. If purchased for this purpose, please ensure that you select the correct wattage and check whether it is a an inductive or resistive load.

This particular module is only suitable for resistive loads (for use with electronic transformers), not inductive loads. If used for mains voltage lamps, please follow the minimum and maximum resistive loads given on this products specification.

Mains Voltage GU10 lamps reduce load to 600W.
