

# LED Tape 100 8W 24V

Waterproof LED Tape 1m (30xSMD 5050 LEDs/m) 24V  
8W 3400K Warm White

**MR. RESISTOR**<sup>®</sup>  
Lighting Specialist Est. 1968

## TAPE100WPWW3400K

8W 3400K Warm White

Quicklink: Q21CC

### General

Construction Plastic  
IP Rating IP65

LED Chip SMD 5050  
LED per Tape 30

### Dimensions

Cut Length 165mm  
Height 5mm  
Length 1m  
Width 15mm

### Electrical

Maximum Wattage 8W  
Voltage 24V

### Light Characteristics

Beam Angle 120°  
Colour Temperature 3400K Warm White  
Lumens 460 lm  
Lumens Per Metre 460 lm/m  
Lumens Per Watt 58 lm/W  
Watts Per Metre 8 W/m

LED Tape is a versatile light source with a wide range of uses that can be either decorative or functional.

Anything from a short linear run of light for under cabinet or plinth lighting, shelving or back lighting mirrors to large scale applications such as low level lighting in corridors, dropped ceilings, cove lighting, doorways, handrails and staircases can be achieved. A wide range of extrusions and diffusers are available to suit any location and produce different effects.

Waterproof LED Tape carries an IP65 rating making it suitable for bathrooms and kitchens. We would recommend using this tape for indirect lighting such as the underside of cabinets or lighting shadow gaps.

These 1 meter LED tapes can be extended to a maximum of 10 meters, when using additional 1 meter reels and pin connectors. Please note that if you are joining a multitude of the 1 meter reels together, the joins between the tapes may show dark spots depending on what extrusion they have been housed in, or how it is to be installed.

For lengths of more than 10 meters, you would need to put the extra tape on an additional power cord and position them one after another, wiring the power cords back to the driver in parallel. This LED tape also has a cut mark every 165mm, meaning you can achieve more precise lengths for your installation. The maximum distance between the power supply and LED tape is 10 meters. We recommend using 1.5mm<sup>2</sup> cable. The maximum total length is 20 meters for the LED tape and power supply combined.

This LED tape is dimmable and we recommend using the Triac LED Dimming Driver. Ensure the dimming driver you use exceeds the total wattage of the LED Tape.
