

## Fire Hoods

Grid & Grid Trimless AR111 Firehood  
245mm x 245mm Up to 1 hour

**MR. RESISTOR®**  
Lighting Specialist Est. 1968

Downlighters, if not safely protected, can become a fire hazard as the hole cut in the ceiling to accommodate them compromises its fire resistance. Current building and wiring regulations have meant firehoods have become a necessity. Not only does a **Grid & Grid Trimless AR111 Firehood** seal to stop fire penetration into the ceiling void left by fittings for up to one hour, but in normal use also offer ventilation to prevent the light fitting from overheating.

Please note that this firehood has been especially designed for use with a *Grid/Grid Trimless Single Downlighter (AR111 type)* shown on the right. Fire protection cannot be guaranteed if used with other products.

### Product Features:

- Reduce sound penetration
- Lightweight, easy to install with no extra support
- Can be fitted from below
- Not affected by moisture (rot proof)
- Maintenance free
- Economical

Please note that all dimensions of firehoods are approximate due to their flexible material construction.
