General

Cap GU10 / AR111
Construction Patented Fire Rated Fabric

Fire Protection Up to 1 hour

Dimensions

Downlight Height 105mm
Downlight Length 327mm
Downlight Width 327mm
Height 130mm
Length 405mm
Width 405mm

Downlighters, if not safely protected, can become a fire hazard as the hole cut in the ceiling to accommodate them compromises its fire resistance. Current building and wiring regulations have meant firehoods have become a necessity. Not only does a **Grid & Grid Trimless AR111 Firehood** seal to stop fire penetration into the ceiling void left by fittings for up to one hour, but in normal use also offer ventilation to prevent the light fitting from overheating.

Please note that this firehood has been especially designed for use with a *Grid/Grid Trimless Quadruple Downlighter (AR111 type)* shown on the right. Fire protection cannot be guaranteed if used with other products.

Product Features:

- Reduce sound penetration
- Lightweight, easy to install with no extra support
- Can be fitted from below
- Not affected by moisture (rot proof)
- Maintenance free
- Economical

Please note that all dimensions of firehoods are approximate due to their flexible material construction.
