Cut Out	100mm (Diameter)
Diameter	197mm
Plate Depth	40mm

Electrical

Maximum Wattage	6.1W
Voltage	12V

The **Icon Isolator Fan 12V** can easily be recessed into wall and ceilings with the powerful axial fan designed with efficiency in mind. It is ideal for use in toilets, en-suites, shower rooms and bathrooms.

This particular model uses 12 volt SELV low watt fans with brushless DC motors which offer a significantly reduced energy consumption compared with standard AC motors. Fitted with ball bearing motors for extra long life this model is also supplied with a 240V AC to 12V DC transformer. This makes it compliant with IEE wiring regulations for wet zone 1 and higher in bathrooms.

A quick core drilled hole enables immediate fixing. The twist on/off cover requires only a single side entry fixing screw. Cantilever fixing lugs enable recessed installation on uneven surfaces. The snap-in control module is quick to fit and wire.

Tiling is a breeze with the circular cover flange, reducing the need to make good. One wipe and the cover is clean. The unique iris shutter, prevents back draughts, operates silently and helps reduce noise ingress. White faceplate covers are supplied as standard, although we sell a range of other colours.

The splashproof Icon isolator fan is supplied and setup for remote switching. A range of interchangeable control modules are available to enable you to match the fan control to installation requirements. The modules we provide as well as their function are linked below.
