

The **LED Tube** is a bright LED colour change tube that is ideally used to give a glow of colour. It can be used in outside coving, soffits, under decking and many other outside applications. The LED Tube can be linked together to give a seamless light. It has several RGB LEDs that, when used with one of the suggested colour change controllers, can produce a vast spectrum of colours. Being IP65 rated the fitting is completely water and weather proof.

Caution: The warm white produced by RGB products is not the same as the warm white produced by single coloured products. By mixing the colours to create warm white a hint of Red, Green, or Blue may appear.

The best way to display RGB products is on a white surface. When projected onto different coloured surfaces and materials the colours can vary.

LEDTUBE 1000 RGB

12W White
