

A **PIR Movement Sensor Switch** with a 1m Lead. The Motion Detector can control loads reaching 500 watts (max.)

**Please note:** This sensor is ideal for all auto switching of cupboard and wardrobe lights. This sensor is for one way operation only.

The presense sensor is able to detect movement linked to differences in heat. When movement is detected, the lamp switches on and remains on for approximately 15 seconds and will remain on as long as the sensor detects movement in its field of use, otherwise it will switch off automatically.
