General

Construction Plastic

Dimensions

Height 65mm
Length 79mm
Width 79mm

Electrical

Voltage 240V

For safety testing of wall sockets and residual-current circuit breakers. With three LED lamps, which show if the installation is made correctly.

Three different tests can be performed:

Test 1

Detects if voltage is detected on earth.

Test 2

Detects on earthed sockets:

- Correct connection, phase to the left
- Correct connection, phase to the right
- if earth is missing
- if neutral is missing
- if phase is missing
- if phase and earth are interchanged
- if phase and earth are interchanged and earth is missing
- Detects on unearthed sockets: if phase and neutral are missing.

Test 3

RCCB-test that checks if a 30mA RCCB trips as it should.

Over-voltage protector: 300V AC/DC
